

**CALL FOR
ABSTRACTS**

Multi-Domain Operations in an Extended Range Environment

**3rd Annual
Multi-Domain Operations
(MDO) Workshop**

**Summer | 2023
Point Mugu Area | California**

This workshop will take a look at our need to be better and faster at getting our products to the warfighter and decision makers. Our intent is to peak discussions on how we can prioritize our resources, identify innovative solutions to overcome the status quo, even in the midst of resource and dollar limitations. We must move towards a test, training, and experimentation continuum that supports all aspects of multi-domain operations in any extended range environment.

Sessions will be unclassified and open to the general T&E community, however, restricted sessions (up to Controlled Unclassified Information (CUI)) may be made available. Abstracts will be reviewed for a presentation during a Technical session or as a poster paper. Abstracts should be non-commercial in scope, pertinent to workshop topic, and no longer than 500 words. Please complete the Abstract submission form and submit to MDO@itea.org.

Program Chair: Gil Torres, Naval Air Systems Command

Technical Chair: Kenny Sanchez, TRMC

Hosted by Channel Islands Chapter

REQUESTED TOPICS:

- Rapid Experimentation
- Cross Domain / Multi-Level Security
- Technology Transition
- M&S to Support MDO in an Extended Range Environment
- Digital Engineering
- Methodologies for MDO in an Extended Range Environment
- MDO Tools in an Extended Range Environment
