

Multi-Domani Operations in an Extended Range Environment

July 18-20, 2023 | Ventura, CA

The ITEA July MDO will bring together leaders from OSD and the services to guide us through the challenges associated with support of Multi-Domain Operations. Challenges range from instrumentation solutions that will support the concept of large geographic areas called upon to track many on many, varying altitudes and velocities including Hypersonics. Adding to the challenges will be discussions on cyber, spectrum and EW.

Come join us and share your thoughts and suggestions with key dignitaries and other attendee's alike, as the Test and Evaluation community takes on these challenges.

TUTORIALS:

- Analytics Training with CHEETAS
- Intro to Cloud Computing
- Introduction Machine Learning
- Laser system T&E Challenges
- MDO and Distributed Testing Solutions with TRMC
- T&E as Part of Agile Development
